# BLUEBOX – GO FOR KERNEL API TESTING

---

Florian Lehner

---

## SECTION ONE

---

# Why?

**netlink**

tc

conntrack

nflog

nfqueue

...

**YOU SHALL**

**NOT PASS**

**YOU SHALL**

**NOT PASS**

## SECTION TWO

---

# How?

“

## Creating a initramfs in Go

- create Go program from template
- compile template to executable
- pack executables into archive

## providing a minimal environment

```
syscall.Mount("devtmpfs", "/dev", "devtmpfs", uintptr(0), "")  
syscall.Mknod("/dev/tty", syscall.S_IFCHR | 0o666, 0x500)  
syscall.Mknod("/dev/urandom", syscall.S_IFCHR | 0o444, 0x109)
```

```
syscall.Mount("tmpfs", "/tmp", "tmpfs", uintptr(0), "")  
syscall.Mount("proc", "/proc", "proc", uintptr(0), "")
```

```
syscall.Mount("sysfs", "/sys", "sysfs", uintptr(0), "")  
syscall.Mount("bpf", "/sys/fs/bpf", "bpf", uintptr(0), "")
```

# Use in a CI pipeline

1. Generate a initramfs
2. Distribute the initramfs
3. Boot n kernel(s) with the initramfs

Tux by

[wikipedia.org/wiki/Tux\\_\(mascot\)](https://wikipedia.org/wiki/Tux_(mascot))

**THANKS!**

- Make the environment configurable
- Switch from RAMFS to TMPFS
